

MUMTAZ AHMAD

Senior Angular Developer | Front-End Architect | Design Systems & Enterprise UI

+91-9958339204 | mumtazahmad2004@gmail.com | New Delhi, India | [linkedin.com/in/mumtazahmad](https://www.linkedin.com/in/mumtazahmad)

PROFESSIONAL SUMMARY

Senior Front-End Engineer with 12+ years building high-performance, accessible, enterprise-scale web applications. Deep expertise across the full Angular timeline (v2–21) — Standalone Components, Signals-based reactivity, Zoneless Change Detection, and the new Control Flow & Deferrable Views — together with RxJS, NgRx, and Nx monorepo architectures. Proven at designing reusable component libraries and design systems, driving Angular modernization and framework upgrades, and delivering mission-critical UIs across retail, gaming, telecom, and trading domains. Technical lead in code reviews, mentoring, and clean-architecture practices; fluent in English.

CORE COMPETENCIES

Angular 2–21

Standalone Components

Angular Signals

Zoneless Change Detection

Control Flow & @defer

RxJS 7+

TypeScript 5+

JavaScript (ES2024)

NgRx (Store / Effects / Signal Store)

Nx Monorepo

Micro-Frontends (Module / Native Federation)

Design Systems & Storybook

Angular Material

PrimeNG

Bootstrap 5

Tailwind CSS

SCSS / CSS Grid / Flexbox

Responsive & Mobile-First

WCAG Accessibility

i18n (ngx-translate)

REST APIs / OpenAPI

WebSockets / STOMP

Firebase

Jest / Jasmine / Karma

Cypress (E2E)

TDD / BDD

Vite / esbuild

CI/CD (GitHub Actions)

SonarQube

Git / Bitbucket

Agile / Scrum

KEY ACHIEVEMENTS

◆ Enterprise Angular Modernization

Led framework upgrades and migrations across Angular 2–21, adopting standalone components, Signals, and Zoneless change detection to cut bundle size and boost runtime performance.

◆ Mission-Critical, Real-Time UIs

Delivered live, high-frequency interfaces using WebSockets/STOMP, barcode/QR scanning, and secure encrypted payloads for retail, gaming, and telecom operations.

◆ Design Systems at Scale

Built and championed reusable component libraries and shared design systems (Storybook, PrimeNG, Material) adopted across multiple teams and independently deployable apps.

◆ Nx Monorepo & Micro-Frontends

Architected modular Nx monorepos and micro-frontend structures with shared libraries, enabling independent team deployments and consistent UI across products.

WORK EXPERIENCE

Senior Angular Developer — Cognizant (via Pacific)

May 2025 – Present

- Lead development of scalable enterprise applications on **Angular 21** with Standalone Components and a Signals-based reactive architecture, applying new Control Flow (@if/@for) and Deferrable Views (@defer) to improve initial-load performance.
- Build responsive, accessible, component-driven UIs with Angular Material and clean modular SCSS; integrate REST APIs and real-time data, and author Node.js build/automation scripts (npm, Vite/esbuild).
- Uphold quality through code reviews, unit testing, and SonarQube quality gates; collaborate with DevOps on CI/CD (GitHub Actions) in an Agile/Scrum team.

Senior Angular Developer — CBRE (via Savitr)

Dec 2023 – Apr 2025

- Delivered scalable, maintainable enterprise web UIs with **Angular 17/18**, RxJS 7+, NgRx, and Angular Material, focused on reusable components, responsive layouts, and WCAG 2.1 accessibility.
- Migrated legacy NgModule-based code to Standalone Component architecture on the esbuild pipeline, reducing bundle size and build times; applied Signal Inputs/Outputs, Signal Queries, and the inject() function.
- Practiced TDD/BDD with Jest and Jasmine/Karma, maintaining >80% coverage; managed application state with NgRx Effects and Selectors.

Associate Consultant — Tata Consultancy Services

Sep 2021 – Nov 2023

- Built enterprise Angular applications with NgRx Store, reusable UI component libraries, and data-driven dashboards adopted across business modules.
- Contributed to CI/CD and Git-based workflows in an Agile/Scrum team; led Jest unit-testing initiatives, achieving high coverage across critical modules.

Senior Technical Lead – Angular — E2E Networks Limited

Apr 2019 – Aug 2021

- Led front-end architecture and Angular upgrade paths, adopting the Ivy renderer for improved tree-shaking and build performance; built modular SPAs with lazy loading, route guards, and interceptors.
- Mentored developers and ran workshops on Angular best practices, component design patterns, and RxJS operators.

Senior Software Engineer — Algoworks

May 2018 – Apr 2019

- Built responsive Angular (v2–8) web applications with HTML5, CSS3, and Bootstrap; consumed RESTful APIs and delivered cross-browser-compatible UIs.

Senior Software Engineer — Pitney Bowes

Apr 2013 – Mar 2018

- Delivered web projects from small apps to large enterprise solutions, building a strong foundation in JavaScript, TypeScript, ES6+, HTML5, and CSS3; designed responsive interfaces and integrated RESTful APIs.

KEY PROJECTS

Retail Click & Collect Platform — Control XEC (CXEC)

- Warehouse and Click & Collect order-management system for a large retail chain, used by warehouse and store advisors to receive, stage, and hand over customer orders across kiosk and hostess modes.
- Implemented barcode & QR scanning (ZXing), on-device PDF/Excel export (jsPDF, html2canvas, ExcelJS), digital signature capture, encrypted payloads (TweetNaCl), and real-time updates over SockJS; lazy-loaded routes with a custom preloading strategy and SonarQube quality gates.

Stack: Angular 21 (Standalone + Signals), Angular Material, Firebase, ngx-translate (i18n), RxJS, Karma/Jasmine

Casino Jackpot Fill & Verification UI

- Gaming-operations application for jackpot fill, processing, and verification workflows, including player enrollment and configurable settings, built on a shared enterprise design system (theme + component library).
- Delivered accessible (WCAG, validated with pa11y-ci), infinite-scrolling data views with strict SCSS/Stylelint standards, route/auth guards, and high unit-test coverage using Karma/Jasmine and ng-mocks.

Stack: Angular 18, PrimeNG, Bootstrap 5, ngx-translate, shared design system, ESLint/Stylelint

Buyside / Sellside Trading Portal (RFO)

- Two independently deployable Angular applications (buyside & sellside) within a single **Nx monorepo**, sharing modular libraries — UI kit, core, wizard, and workflow — and common SCSS design tokens.
- Managed complex application state with NgRx (Store, Effects, Router-Store); built interactive Highcharts dashboards, multi-step wizards, and multi-language support via ngx-translate.

Stack: Angular + Nx monorepo, NgRx, Highcharts, PrimeNG, ngx-bootstrap, SCSS shared libraries

Telecom On-Demand Network Provisioning Portal

- Self-service portal for on-demand network/connectivity ordering, with real-time order tracking over STOMP/WebSockets, Google Maps integration for network sites, and multi-currency pricing.
- Generated strongly typed API clients from OpenAPI specs, implemented NgRx-driven state, file uploads, GTM analytics, and internationalization with flag icons.

Stack: Angular 15, NgRx, Google Maps, STOMP/WebSockets, OpenAPI codegen, ngx-translate

EDUCATION & LANGUAGES

Master of Computer Applications (MCA) — Magadh University, 2011	English	Fluent	●●●●●
Bachelor of Commerce (B.Com) — Board of Technical Education, 2008	Hindi	Native	●●●●●
